Chennai,Tamil Nadu-India

OBJECTIVE

Full Stack Web Developer with hands-on experience building responsive applications using JavaScript, Node.js, Express.js, and EJS. Skilled in designing RESTful APIs, dynamic templating, and mobile-first UIs, with strong foundations in backend logic and version control. Proven ability to deliver end-to-end projects from structured server-side architecture to intuitive frontend design, ensuring scalability and maintainability. Passionate about clean code, collaborative development, and solving real user problems through technology.

EDUCATION

- **SRM Institute of Science and Technology** May 2027
M.Tech Computer Science Engineering Chennai, India
- **Vellore Institute of Technology (VIT)** May 2025
B.Tech Electronics and Communication Engineering Chennai, India
- **Ideal Indian School** May 2021
Secondary Education Doha, Qatar

PROJECTS

- **IoT-Based Drinking Water Quality Monitoring System** March 2024 - May 2024 [\[🔗\]](#)
Tools: ESP32, TDS/EC Sensor, DS18B20 Sensor, OLED Display, Thingspeak IoT Platform
 - Developed an IoT-based system to monitor drinking water quality by measuring electrical conductivity and temperature, and implemented real-time data transmission to the Thingspeak platform by integrating ESP32 with TDS/EC and DS18B20 sensors.
 - Created a display for water quality parameters on an OLED screen, ensuring compliance with WHO standards for safe drinking water, and applied sensor integration techniques to analyze water quality parameters.
- **Real-Time Prediction and Optimization of Solid Waste Generation Patterns** August 2024 - November 2024 [\[🔗\]](#)
Tools: Python, Google colab, Kaggle Datasets
 - Developed a predictive and optimization framework for urban solid waste management using SARIMA, XGBoost, and Meta-Regressor, achieving high accuracy in forecasting waste generation patterns and optimizing waste collection schedules.
 - Implemented real-time data processing and feature engineering using Kaggle datasets, handling large-scale time-series data to support decision-making and improve model performance with Optuna-based hyperparameter tuning.
- **Temperature Controlled Fan Using Arduino** March 2024 - May 2024 [\[🔗\]](#)
Tools: Arduino Uno, DHT11 sensor, 16x2 LCD, DC Fan, potentiometer, Arduino IDE
 - Developed an energy-efficient fan system using Arduino technology, featuring real-time monitoring, dynamic speed adjustment, and user interface elements for versatile applications in various environments.
 - The system's modular design allows for scalability and customization, demonstrating the potential for practical applications in temperature regulation for server rooms, households, and industrial settings.
- **Voice-Controlled and Obstacle-Avoiding Robotic Car** March 2024 - May 2024 [\[🔗\]](#)
Tools: Arduino UNO, HC-05, ultrasonic sensor, L298N, DC motors, MIT App Inventor, Arduino IDE.
 - Developed a voice-controlled robotic car, equipped with an Arduino UNO, HC-05 Bluetooth module, and ultrasonic sensors, uses Google Speech Recognition for wireless control and autonomous navigation.
 - The project showcases seamless human-robot interaction, safe navigation, and modular design, showcasing integration of robotics, IoT, and automation technologies for scalability and future enhancements.
- **Blog Web Application** August 2025 - December 2025 [\[Link for Web Blog Application 🔗\]](#)
Tools: Node.js, Express.js, MongoDB, Mongoose, EJS, Bootstrap, CSS
 - Developed a secure full-stack blogging platform with MongoDB integration, enabling authenticated users to create, read, update, and delete blog posts.
 - Implemented session-based authentication and role-based authorization, ensuring only blog owners can edit or delete their own posts.
 - Built dynamic server-side rendering using EJS and designed a responsive interface with Light/Dark mode support.

Dice Game Web App

Tools: HTML,CSS,Javascript

May 2025 - June 2025

[\[Link for Dice Game Web App 🔗\]](#)

- Developed a two-player dice game that rolls dice on page refresh and dynamically displays the winner using DOM manipulation.
- Used JavaScript to generate random numbers, update dice images based on results, and determine the game outcome.
- Designed a clean and responsive layout using HTML and CSS for a simple interactive user experience.

Tindog Website clone

May 2025
Tools: HTML, Bootstrap, CSS
[\[Link for Tindog Website 🔗\]](#)

- Built a simple, responsive and mobile-friendly landing page inspired by the Tinder UI, tailored for dogs.
- Utilized Bootstrap components such as grid system, cards, buttons, and navbar for layout and styling without custom JavaScript.
- Focused on clean UI/UX design using only HTML, CSS, and Bootstrap, ensuring compatibility across devices and screen sizes.

To-Do Web Application

January 2026 - June 2026
Tools: Node.js, Express.js, MongoDB, EJS, HTML, CSS, JavaScript
[\[Link for To-Do Web Application 🔗\]](#)

- Developed a full-stack To-Do Web Application using Node.js, Express.js, MongoDB, and EJS following the MVC architecture pattern.
- Implemented secure user authentication, CRUD-based task management, priority tracking, overdue/completed status indicators, and responsive UI components.
- Designed an interactive calendar view with color-coded task priorities and deadline visualization to improve task organization and productivity.

SKILLS

- **Programming Languages:** JavaScript
- **Frontend Technologies:** HTML5, CSS3, Bootstrap, EJS
- **Backend & Web Development:** Node.js, Express.js, Templating Engines(EJS)
- **Cloud Technologies:** AWS (Amazon Web Services)
- **DevOps & Version Control:** Git, Github
- **Mathematical & Statistical Tools:** Matlab-Simulink
- **Other Tools & Technologies:** Visual Studio Code (VSC), Microsoft Office Suite (Word, PowerPoint), Postman

CERTIFICATIONS

- **AWS Certified Cloud Practitioner (AWS CP)** *February 2024*
- **AWS Certified Solutions Architect – Associate (SAA)** *October 2024*
- **MATLAB Onramp** *July 2023*

LANGUAGES

English (Upper Intermediate)
Tamil (Native/Bilingual)
